Congress, 9-14 June,2013 . Marrakech,Morroco.

# Environmental Education in India: Powered by Ubiquitous Technologies

---

*A systemic View to The use of Technologies to Support and Promote  
Environmental Education in India*

Abstract:

*A great digital divide exists in the urban & rural India with respect to technology enabled learning, in schools implementing environmental education. Ubiquitous technologies has the potential to narrow down this divide in form of a communication tool to create, collaborate & share much in line to the Web 2.0 principles. To make it fruitful it's important to scan existing ubiquitous technologies used in urban & rural India; develop a framework founded with pragmatic design principles to enable effective & affective environmental education assimilating these 'present everywhere' technologies.*

*KeyWords:- India, Learning, Ubiquitous Technologies, Urban-Rural, Web 2.0*
